

Beating and Suction with Pulse Air!!

Tornado Vacuum Cleaner Head

PV-2/PV-3

Suck in all the dirt and dust from inside the fibers!!

Clean the seats easily

It can clean the seats and mats in your vehicle to extreme cleanliness.

This product has both qualities of the pulse air and vacuum.

By using the pulse air to beat the carpet or seat, it brings out the dirt, dust and etc. And then its sucks it all up with the vacuum. By using this we save a lot of time and makes the process easier.

The Pulse Air Raises the Pile off the Carpet

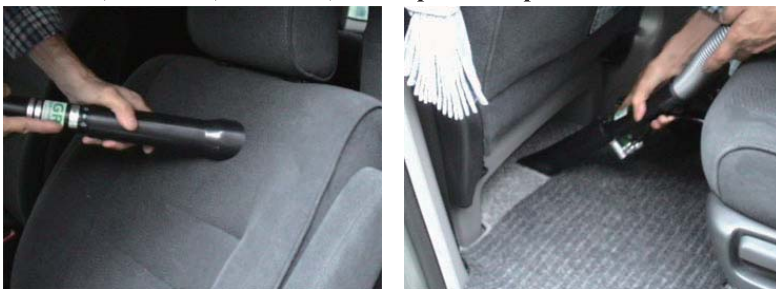

Some of the conventional vacuum cleaners have the beating mechanism, but the Tornado Vacuum cleaner's efficiency of beating has been significantly enhanced with the help of Pulse Air. The Pulse Air reaches the base of the fibers, sucks on the fibers and beats out the dirt and dust. And the nozzle sucks up the dirt simultaneously. Therefore the dust doesn't scatter all around due to air blow.

Features of the Tornado Vacuum Cleaner

By using three kinds of adapters and mounting rings, you can attach it to most of the general vacuum cleaners. It has two different types of nozzles, so it can also vacuum in narrow areas and the corners of the car interior. The PV-3 has an On/Off valve and an air tube, and it is specialized for cleaning in narrow areas.

<Application Example>

Car Seat, Car Mat, Doormat, Thick-piled Carpet

Specifications	
Model Name	Tornado Vacuum Cleaner
Type	PV-2/PV-3
Air Pressure	0.4 to 0.8 MPa
Air Flow Rate	190 liters/min at 0.5 MPa
Operating Temperature	10 to 50 deg C (50 to 122 deg F)
Connection Part	Male Coupler

*This product is developed for the removal of dust that is difficult to suck in with the general vacuum cleaners, such as fine dust, pet hair ticks and pollen. So it cannot be used like a general vacuum cleaner. For example; do not suck in cigarette buds in the ash tray.
